### 4. Setup Your Printing and Print

After the connection is setup, the windows of slicing profile will be shown at the bottom of the selected printer.

Print parameters are setup in the windows of slicing profile. Please select optimized print parameter based on the object to be printed and press "Print" button to slice.

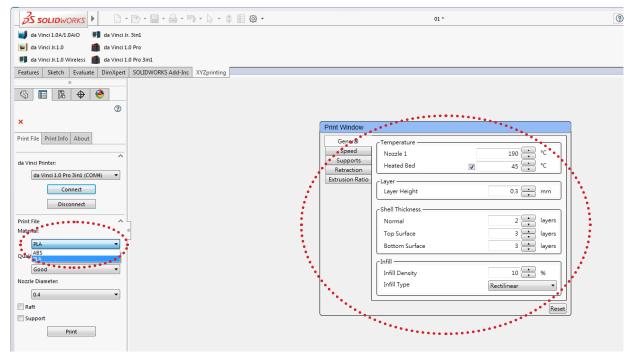

After the object is sliced, press "Print" to start printing. You may also click "Save" to save the file in "3w" format.

### <u>Notice</u>

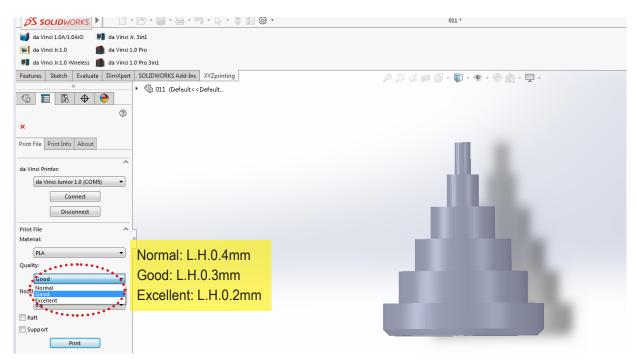

da Vinci series can be select material. Moreover, da Vinci 1.0 Pro and da Vinci 1.0 Pro 3 in 1 are advance model. These two model can selected more detial printing parameter.

### 4.1 Quality

The quality of print object will respect to layer height (L.H.). There are three quality options: Normal (L.H.:0.4mm), Good (L.H.:0.3mm), and Excellent (L.H.:0.2mm).

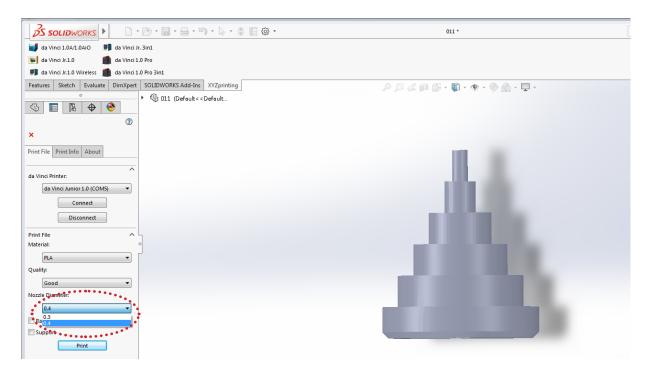

Printed product quality will affect printing time. For example, high quality prints takes more time than low quality prints since smaller layer height creates more precise print objects.

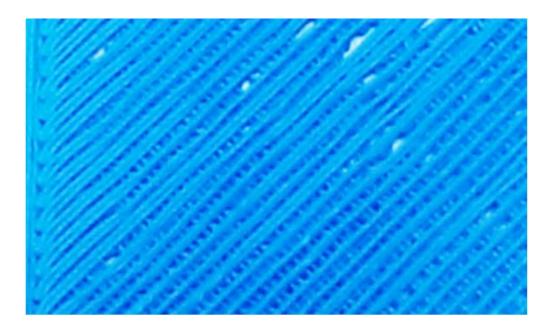

### 4.2 Nozzle Diameter

Nozzle diameter can be selected (0.3/0.4mm) and only for da Vinci Jr. series.

### 4.3 Raft

You need to put more attention when your print slender objects. Since its physical unstable, print objects may buckle or twist. You may add "raft" when you printing slender objects, increasing contact area between print objects and print bed. Rafts offer stable structure during process. Moreover, Printouts with raft on the bottom is easier to be removed from the print bed.
